

How to change or check APN Settings.

- Once modem is activated plug in and power on (red button on back of equipment)
- Connect the modem either directly to your computer via the Ethernet cable or wirelessly by connecting to the network: DYNAMI_XXXXXX password: 1234567890
- Open internet browser and type 192.168.100.1
- Type admin and click on the orange login button
- Go up to the browser search bar and backspace until the # symbol and replace with apn_setting so the full URL should read: 192.168.100.1/index.html#apn_setting
- You will see a section that says Mode click on the circle that says Manual
- Click orange button that says Add New
- In the Profile Name section type: vzwplus
- APN Section type: so01.VZWSTATIC
- Make sure PDP is set to IPV4
- Click Apply (you will see it says Success)
- Power the device off then back on with red button on back of device
- Wait for Wifi light to turn green
